Full stack developer

'Do, fail, improve'

Summary

Experienced Java fullstack developer with a great concern for results and quality.

I love to learn, apply and research on my own new solutions to improve lifecycle and quality of my projects.

My past experiences taught me many things, but the most important one is that the only way to succeed is to try, fail and improve, which is the reason I love to use TDD methodology. Ideally looking for challenging missions in fields I am not yet comfortable with or I don't even know, with high expectations on quality and results, either remotely or on site.

What I am not looking for :

- Team who does not understand the value of TDD
- Team where human qualities are not the central key to success
- Team following others methodologies without adding adaption or cleverness
- Team who keeps doing the same mistakes without will to improve

Experiences

07/18 - Now **Full stack developer**

Freelance, Remote, Worldwide

Currently in development for my own project, I am becoming much more familiar with all modern DevOps tools such as AWS, Kubernetes, BitBucket and its ecosystem,... as well as with modern frontend tools such as React.js, Bulma and SASS.

06/16 - 07/18 **Lead full stack developer**

Ubik Ingénierie for Decathlon E-Commerce, France

My main tasks were to :

- improve quality of the payment perimeter through code reviews, tests, spreading best practices, upgrading frameworks and API...
- train newcomers to be operational as quickly as possible by redacting documentation on processes, plan training, pair programming and mob programming sessions
- open the application source (which is not as easy as it seems as it points out many flaws, severe or minor)
- make the application more robust and resilient by adding stress tests, measure health and plan emergency solutions in urgent cases

06/14 - 06/16 **Full stack developer**

Ubik Ingénierie for Decathlon E-Commerce, France

My main mission was to maintain, improve and support the centralised payment middleware as well as integrate it on the European Decathlon website.

When I arrived, we were starting to move toward agile methodologies and it has been a long and interesting voyage, which never ends as continuous improvement was and still is my motto.
